

In The Claims:

Please amend claims 5, 6, 11, 14, 16, 17, 26 and 27 as follows:

5. (Amended) A system for managing a plurality of electronic training devices,

*Sub B7
C3* the system comprising:

a client communication system that receives control data from at least one of a plurality of clients, the control data associated with tasks to be performed for a training exercise;

a device management system that provides low-level commands to the electronic training devices based on the control data to implement functions that change a configuration of the electronic training devices; and

C1 a control system that accesses a first set of the electronic training devices based upon one or more requirements of the training exercise, the control system manipulating the first set of the electronic training devices according to the control data using the device management system.

6. (Amended) The system as set forth in claim 5 wherein the control system is further configured to access a second set of one or more of the electronic training devices based upon the requirements of the training exercise, the control system manipulating the first set and the second set of the electronic training devices for the training exercise.

C2 11. (Amended) The system as set forth in claim 10 wherein the first or the second set of the electronic training devices provide one or more results of the at least one instruction execution back to the at least one client through an interface system, the interface system translating the results from a first format understood by the first set or the second set to a second format understood by the at least one client, the communication system transmitting the translated results back to the at least one client.

C3 14. (Amended) The system as set forth in claim 5 wherein an interface system translates the control data from a first format understood by the at least one client to a second format understood by the first set or a second set of the electronic training devices.

Sb D27 16. (Amended) A method for managing a plurality of electronic training devices, the method comprising:

receiving control data from at least one of a plurality of clients, the control data associated with tasks to be performed for a training exercise;

providing low-level commands to the electronic training devices based on the control data to implement functions that change a configuration of the electronic training devices;

accessing a first set of the electronic training devices based upon one or more requirements of the training exercise; and

manipulating the first set of the electronic training devices according to the control data using the low-level commands provided to the electronic training devices.

C4 17. (Amended) The method as set forth in claim 16 further comprising accessing a second set of one or more of the electronic training devices based upon the requirements of the training exercise, and manipulating the first set and the second set of the electronic training devices for the training exercise.

Sb D37 26. (Amended) A computer-readable medium having stored thereon instructions for managing a plurality of electronic training devices, which when executed by one or more processors causes the processors to perform:

receiving control data from at least one of a plurality of clients, the control data associated with tasks to be performed for a training exercise;

providing low-level commands to the electronic training devices based on the control data to implement functions that change a configuration of the electronic training devices;

accessing a first set of the electronic training devices based upon one or more requirements of the training exercise; and

manipulating the first set of the electronic training devices according to the control data using the low-level commands provided to the electronic training devices.

C5 27. (Amended) The medium as set forth in claim 26 further comprising accessing a second set of one or more of the electronic training devices upon the requirements of the

(S)
SMCL training exercise, and manipulating the first set and the second set of the electronic training devices for the training exercise.
